Good afternoon Doug,

Due to the capabilities of the computers in my office I am forwarding to you the report that Theresa Armbruster created to reflect the most current information we have on our tank situation as well as time line reflecting the activity undertaken to characterize and remediate the site.

There are the three attachments included. The first is her report which sites nine different attachments. Due to formatting issues only one is included. It is the one labeled attachment 9. The second attachment include items 1-8. The 3rd attachment contains the bulk of the site characterization.

The documentation represents the most thorough compilation of all data we capable of providing at this time.

You are more than welcome to come visit us at the Truck Stop on July 11, 2016 when we will begin excavating the tank and formulating some plans for completing the data gathering process and remediation.
